OUP	Introduction to Molecular Evolution & Phylogenetics	Revise 3	Thomson Digital	21 Nov 2015

List of Case Studies

1.1	Identification: solving the mystery of the Chilean blob	25
1.2	Forensics: using DNA to trace trade in whale meat	28
2.1	Environmental DNA: tracking changes in Arctic vegetation over time	54
2.2	Ancient DNA: cataloguing diversity of extinct giant birds	57
3.1	SNPs: genetic resources for crop development in a non-model species	88
3.2	Mutation rate: mutation accumulation in a laboratory population	91
4.1	Replication: taller plants have lower rates of molecular evolution	124
4.2	Hierarchies: genes and language track human settlement of Oceania	127
5.1	Duplication: gene copies and microsatellites help aphids tolerate nicotine	161
5.2	Genome: a leukaemia virus becoming part of the koala genome	164
6.1	Gene families: duplication and loss of taste receptor genes	191
6.2	Genetic code: multiple proteins from a single human gene	194
7.1	Selection: tracking insecticide resistance over time using museum specimens	222
7.2	Variation: experiments on evolutionary rescue under environmental change	225
8.1	Substitution: mutation accumulation in asexual walking stick insects	255
8.2	Population size: inbreeding depression in an endangered species	258
9.1	Speciation: evolution of novel flower colour through reinforcement	288
9.2	Barcoding: cataloguing weevil diversity in New Guinea	291
10.1	Alignment: identifying insertions and deletions in endosymbiont genomes	321
10.2	Horizontal gene transfer: genes in parasitic plants derived from their hosts	325
11.1	Networks: bobtail squid and their symbiotic bioluminescent bacteria	362
11.2	Distance: tracing the origins and evolution of the domesticated apple	365
12.1	Epidemiology: using ancient DNA to identify the origins of a plague	396
12.2	Prediction: relating ethnobotanical resources across different cultures	400
13.1	Rates: flightless insects have faster substitution rates	432
13.2	Diversification: mutation rates are linked to species richness in plants	434
14.1	Calibration: did kauri survive the Oligocene drowning of New Zealand?	476
14.2	Dates: using phylogenies to trace the source of disease outbreaks	480
